When I use this program I downloaded to create a free Renegade dedicated server, it requires me to type my account name, password, and serial number. I have TWO serials: one from just plain renegade, and one from the 1st decade. Anyway, niether work. So, I tried requesting 1 from westwood. THEN, THEY HAVE THE NERVE TO TELL ME THEE ARE NO SERIALS LEFT!!!!!

So anyway, I try going to westwood online support, which ends me up going in circles. So if anybody knows what 2 do, that would be great! thanks!

We truely don't need even more servers. However, try one of the sticky topics in "win32 fds" subforum to find a FDS serial. Then don't forget to replace it with your renegade client serial in server.ini
