Hi im not really good in english, i dont have found some other Topic like min.

My Problem is i have install renegade and updates, i have a Wol account. now i had install renguard, no errors or so.

but now i will start up renguard, and the window open and i see the little scrollbar at the right side, but now the program stop and freeze. Windos say in Taskmonitor, that it not answer.

now some one can help me pls?

on my old pc renguard has function without any problems.

pls in easy english or we have some german here thats will be welcome.

Make sure your anti-virus software allows RenGuard to connect to the internet.

Make sure your firewall allows ports 80 and 6300 to connect to the internet from your computer.
