---

I had Renegade w/Renguard about a month ago. I had to reformat my hard drive and do a clean install of Windows XP Home. Now Renguard doesn't work.

"game.exe has encountered a problem and needs to close." This happens before I can even see Renguard. I can play just fine without Renguard, but then I cant play on the servers I want to play on (I was WINNING when it kicked me off... I was pissed).

WTF? I've tried uninstalling, reinstalling, etc. Tried the .zip file to manually do it, same result. I even deleted a bunch of crap on my hard drive, Renegade included, defragged it to move shit around, and then reinstalled it and it STILL didn't work.

Please help me.

that error occurs when RG loses connection to it's master servers, it's probably a network glitch and shouldn't happen again.

If your getting this frequently you might have connection problems at your end, or RG is not getting enough bandwidth..
