Select Command & Conquer: The First Decade. Ignore the part about the DVD drive and free
disk space, and you'll have your minimum requirements.

That requires an Active X installation to run.

Renegade can run on a p2 400MHZ with a GF2 card or less. It will just average out on 30 fps in a

small server. The bigger the servers the faster the CPU will have to be..graphics card doesn't have to be so fast but it's a plus.
