Hi,

I have a problem.... I have Renguard, but it always disconnects because of this.

[16:50] Trying to connect to server #1...Connected

[16:50] Secure link established.

[16:50] Welcome to RenGuard , shkkf!

[16:50] To launch Renegade, please click 'Renegade'.

[16:50] Bad/Corrupted file data\always.dbs has been found in your renegade directory

[16:50] Bad/Corrupted file data\Always2.dat has been found in your renegade directory

[16:50] Disconnected from RenGuard network

Now, I have tried uninstalling it and reinstalling it! Even uninstalled renguard and reinstalled it. removed the corrupt files and everything. But it still happens! It drives me nuts. Since even when I get to play then the host evicts me since they think I'm cheating!!!

I was wondering does someone know how to make sure this doesn't happen? Since it really is driving me crazy.

Sincerely shkkf

When you load up RenGuard, wait a few seconds before clicking "Renegade".

Update to Renegade version 1.037 before installing Renguard.

I will give you the download link to the patch. Select the language version of the game you own. (Usually english)

Please click on which version of Renegade you have.

English
Chinese
French

German
Japanese
Korean

WARNING: Downloading a patch that doesn't go along with the version of the game you have will corrupt your game!

@cmatt42:

I have yet to see Renguard make a misconception about the always.dbs and the always2.dat. The only time I have seen that error occur was because somebody did not update to the 1.037 patch before installing Renguard, hence my post. However there is a first time for everything, and if shkkf has the 1.037 patch already than the problem lies elsewhere. My point is I never took your post for being wrong.
