Alrighty, I load up my renegade, and I get to the Advanced Server Listings button. Click it, and to my avail! *Gasp* Requesting Server Listings Times Out! Any Idea How I can get by this? I've tried just about everything now.

Thanks in advance.

check if your firewall didn't block it or if windows firewall didn't turn itself on.

I no longer have a firewall, and one time I got to the advanced server listings but then it wouldn't let me join any games cause it kept timing out lol... It used to be fine, maybe it's just an ISP problem for today.

I had this problem before, sometimes the WOL -> Xwis redirect seems to break for some areas. I downloaded the XWISC tool and used it to manually set the XWIS ip in WOL internet components and it worked. You can easily reset the ip back to WOL if you want when the redirect comes back online... was not working for about 2 days for me before.

<http://strike-team.net/nuke/html/modules.php?op=modload&name=Downloads&file=index&req=viewdownload&cid=1>
first download on the list

Okay...Im not running a firewall, but it said unable to negotiate firewall port failure or something or

other. It's utter bullshit if you ask me. Im hoping that this little problem will time it's self out because this was my day off and I wanted to play renegade.

whaaa ooo

i has same problem

still have it, but i direct join to XpHaZe ONLY cus it Owns

erm, just, reinstall rem, seems to work for me

Wtf, this is bogus, it worked for one day, and now it hasn't worked for the last four. I wish I could get some support, because this is happening to more than just me...

Anyways, it won't work, I CANT EVEN DIRECT CONNECT TO A SERVER ANYMORE.

Have you checked your connection to see if you are losing packets?
Here is the text for two .bat files. Just copy and paste into notepad and give it the .bat file extension. Then double click to run it. To show file extensions,
In windows explorer tool bar >tools > folder options > view > un-tick "hide extensions for known file types"

If you don't have a firewall or XP SP2 you will be able to recieve
"incoming echo requests"

The 127.0.0.1 is your computer or localhost. The ping should be less than
1 millisecond. The 70.84.132.91 is = to www.renegadeforums.com you can use your
ISP domain if it's ping-able, or any domain that's ping-able. I would suggest pinging your ISP or
another number in that domain.

ping -t will ping the server until you press
CTRL + C ping -a will only ping it 4 times.

cut line

```
ping -a 127.0.0.1  
ping -a www.renegadeforums.com  
pause
```

cut line

```
ping -a 127.0.0.1
ping -t 70.84.132.91
```

example of my pings

```
C:\Documents and Settings\Administrator\Start Menu\Programs\
My Favorites>ping -a 127.0.0.1
```

Pinging localhost [127.0.0.1] with 32 bytes of data:

```
Reply from 127.0.0.1: bytes=32 time<1ms TTL=128
Reply from 127.0.0.1: bytes=32 time<1ms TTL=128
Reply from 127.0.0.1: bytes=32 time<1ms TTL=128
Reply from 127.0.0.1: bytes=32 time<1ms TTL=128
```

Ping statistics for 127.0.0.1:

```
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 0ms, Maximum = 0ms, Average = 0ms
```

```
C:\Documents and Settings\Administrator\Start Menu\Programs\
My Favorites>ping -a 70.84.132.91
```

Pinging 5b.84.5446.static.theplanet.com [70.84.132.91] with 32 bytes of data:

```
Request timed out.
Reply from 70.84.132.91: bytes=32 time=8ms TTL=52
Reply from 70.84.132.91: bytes=32 time=9ms TTL=52
Reply from 70.84.132.91: bytes=32 time=9ms TTL=52
```

Ping statistics for 70.84.132.91:

```
    Packets: Sent = 4, Received = 3, Lost = 1 (25% loss),
Approximate round trip times in milli-seconds:
    Minimum = 8ms, Maximum = 9ms, Average = 8ms
```

```
C:\Documents and Settings\Administrator\Start Menu\Programs\
My Favorites>pause
Press any key to continue . . .
```

This is BAD BAD BAD. note the "Request timed out." BAD BAD BAD
ping times are good but 25% packet loss is BAD BAD BAD
