My dad built his new computer and I helped!

We got a great deal on the hard drive! 300 GB Seagate HD for \$80.00!

But anyways...

yeah.

I made bootdisks for my old computer still says NTDLR is missling...

but I got to get another keyboard. kwyboard is what is causing some problems but yeah!

About the comp me n' my dad built.

300 GB HD

128 vid card (i think 128)

Motherboard that supports dual vid cards! w00t!

crappy CD drive but it was 20 buks and were pour.

floppy drive.

awesome processor (dont know spicefics)

500 watt power supply AND ITS SHINY SO SHINY YOU CAN SEE YOURSELF IN IT!!!!!!

See through case with cool LED's

Yeah... ok l8r downloading Americas Army to see how it runs!

I remember playing Half Life 2 with my stick of 512 that I originally had, world of difference when I

put the gig in. Speeded up the load times considerably.

it's only a myth that you need RAM for a computer to work. Everyone knows that ...

I think you mean 512mb.

Er, I copy-pasted my info from my newly created X-fire account. It auto-detected my info, so it might have misread. My version of Norton takes up a crap-load of resources. Might have caused that.
