Hey guys...

My Renegade has been having alot of problems lately. I will be playing a game and then my renegade will shut down, and it says "Send error report" or "Dont send"... you know what im talking about. It does the same thing with renguard on and off.

I have uninstalled renegade and all of the files like 3 times and nothing seems to work.
Can anyone help?

Well, the RenGuard thing has been issued time and time again, but this is the first that I've seen as this sort of thing happening to the plain ol' Renegade barebones client. Weird...

Did you install it in a different directory? That might help (long shot)...
