Well I have my page up/down keys up there set to do stuff like use and reload and crouch so I use them often.

But I put CP2 in and it has this think when i hit my use key "End" it says how many C4's there are and when i reload it says "A vote is not in progress"????

how do I make it stop?

Try fooling around with the file called keycfg.exe inside your \Renegade\ folder.

or delete Keyscfg.exe or whatever its called, its not needed, just makes you do some movements which quite frankly aren't worthwhile.

It's true that it's not needed, but you're completely wrong when you said it "just makes you do some movements which quite frankly aren't worthwhile." There are several other keys that are useful. For example, I set my middle mouse button to bind-lock my vehicle in a server that supports it (many of them do). This way, I don't have to waste time typing !bl and whatnot.

Your both wrong ^^ keycfg.exe simply lets you modify the keys, removing it does not disable the commands, it just means you don't have a GUI interface to modify what key activates them.

If you want to disable them you need to delete keys.cfg in the Data folder Although not sure if this will crash your bot when scripts.dll or bhs.dll tries to load it, perhaps best just to clear everything in it.

Ah, I read that as the .cfg file, not the executable.
