it looks like that?

How do I add a application to the list and whats all that
"Start" "End" "TCP" stuff?

if you want to forward ports for an application, then this is how it works:

Say you're using Azureus to download torrents, and you need to forward the port 14652 (this is totally an example). What you do is put 14652 in the start AND end boxes, and then find out your computer's network IP (not internet IP) and put it in as the IP you're forwarding the port to. Then you usually would select both in the drop-down menu that says "TCP". That's how it works. You can put in an application name if you want, but it makes no difference except to keep track of what you've forwarded.

Try forwarding 4000 in one row and then in another row put 1140 in the start box and 1234 in the end box.

huh?

So put 4000 in the boxes for 1 row and 1234 and that other number in the 1 under it?

You can find the port in the settings within Generals. Do the same thing for that port. Actually, I think you can change the port in the game to whatever you want, but you still have to use that same port to forward in your router settings.
