Hey guys! I'm new here and was wondering if anyone could help me out. I uninstalled Renegade from my computer some time ago and now when I am unable to reinstall it. The installation starts and before anything comes up on the screen the installation prog minimizes and stays in my taskbar. If I try to open it it flashes black and then minimizes again.

I had a look through these forums before posting and I read something about it not installing if I don't have the correct codecs to play the video or something along those lines. If so, what do I need and where can I get them? I also read something about TweakXP causing problems with installation...I definitely had that on my computer but I uninstalled it and all registry keys etc.

I'm having the same trouble installing RA2 and YR so it's likely to be a problem with my system rather than with renegade.

Any help would be greatly appreciated. Thanks

Try using alt-tab to get into it. Does it still minimise then? Also try right clicking on the program in the taskbar and maximise/minimise to check if this does help. Strange problem...

Thanks for the replies. I'm pretty certain there's no spyware etc. on this machine.

I tried using Alt-Tab and right clicking the installation prog but no results

EDIT: OK after I left the installation prog minimised for a while and then maximised it, it worked and I can now see the installation screen. Very strange...but it works. Thanks for all your help guys
