what i need to know is what is the easiest way of adding the buildings from ftp.westwood.com without having to merge all of the exterior, interior, and parts separately; what is the easiest way of adding a building with only one merge?

thank you.

the correct way would be the easiest way

Your not supposed to merge all the different parts, LE does that automatically. Just merge the main exterior.

i tried that with the conyard, but when i exported it and added the terrain all i got was the exterior i added to renx; no interior.

edit: sorry, i used the wron ext model

thanks for the help
