Well ive got a problem with RenegadeTool2 loading correctly.
I gotten this problem before but i forgot what I did to fix it.
I jsut redownloaded it and reinstalled it like 3 times.

Downloaded from: <http://www.cncnz.com/files/renegade/utills.shtml>

Anyways What my problem is that nothing loads when the program itself loads. I cant edit anything since its not there. Notice the [+] next to most of the things on my first SS. When I click on some that do have theres no files in it.

Either make a new mod folder using LE or copying the files manually. And if there are already folder missing when you add a mod, I dont know .

But if so i would just manually insert them

Sorry for the double post but my edit button does show up (javascript error).

Anyways im missing the "presets" folder. When I had a freind email me the files/folders I need and put it in. It all worked. only i receive that bloody error message and it closes.

This is after i plug in all the missing things. Notice how i now have the [+] and all is in place. Only i get this error.

This is from my editorslog.

Most likely its the first decade bug. Go into your registry and change the keys under:

HKEY_LOCAL_MACHINE\SOFTWARE\Westwood
HKEY_LOCAL_MACHINE\SOFTWARE\Westwood Studios

To fit your current installation path.

I dont have C&C First Decade installed anymore. Infact I have no renegade installed. This is the problem
How could i have forgotten that...

[View Forum Message](#) <> [Reply to Message](#)

the havoc file is simply the navigation file used in leveledit when in walking mode, it should be in your r mod directory under characters.
it could also be a faulty building controller, thus download the program from another directory

Could this do with the reason that I deleted LevelEdit without uninstalling it? I've searched my whole PC for anything that involved LevelEdit. Then I downloaded it from westwood FTP and many other sites. Then I installed it. Got nearly the same problem. And no I have no skins in that folder. Perhaps someone can send me a premade mod folder?

When i was adding/removing files i noticed that the objects.ddb was the reason it would crash. I would add it and EVERYTHING would work. Only 5 seconds into to full load it would crash. Without it nothing loads

After "adding" the files that the report shows i get this.

```

make sure your registry is pointint to your renegade folder. LE will read the textures from renegade but it has to be set right

PaRaDoX wrote on Mon, 28 August 2006 03:45make sure your registry is pointint to your renegade folder. LE will read the textures from renegade but it has to be set right

Ive been told this by a few people only I dont know how. I installed C&C First Decade. Maybe this is a reason? I remember doing a search looking for anything that was involved with LE, Then deleting it.
