Hello. I need help.

I want display on my server fps example 80. Default is 60. I today play Renegade on XXX server and here has been displayed 30 SFPS. On another server is displayed 120 SFPS.

What i must exactly edit??? Is it in server.dat or another file???

Thanks.

There is another topic about this and the hack is on the BlackIntel site.
It isn't anything special though, performance will not go up, only CPU usage might noticably increase... I wouldn't recommend it, and I wrote it so I know what I'm talking about, but if you still want it, it's on our site.

Well, I do recommend it.

It's good if you want to host up to 2x more on your box. It works like a charm

lol, that's true, it can be used to decrease the sfps... increasing it is useless though ;P
