Establish a TCP connection with the IRC server on port 6667, then send the following commands:

"NICK <Nick here>"

"USER <User here> * 0 :<Name here>"

If you recieve a RAW 433 command back from the server, that means the nick you selected is in use and you need to choose another one.

When you recieve a RAW 376(MOTD) from the server you should start joining channels, identify for your nick, etc.

When you recieve a RAW 376(MOTD) from the server you should start joining channels, identify for your nick, etc.

thanks, it worked (at last) but i dont get the USER command: / does it just show who you really are?

also i cannot login with my origonal nick it says that it is in use.

View Forum Message <> Reply to Message

When you whois someone it shows

"<Nick> is <User>@<Host> * <Name>"

The USER command sets the User and Name part.

View Forum Message <> Reply to Message

Are you getting a 433 back from the server? If so the nick is in use.

Subject: Re: mIRC

If you closed the IRC connection without sending a message to the server saying your closing it, then it probably thinks your still logged in.

Subject: Re: mIRC

View Forum Message <> Reply to Message

i thought that the mIRC client automaticly does this when you close also it sends a PING to you and you have to reply PONG <whatever PING said> and it will keep the connection.

Subject: Re: mIRC

Posted by danpaul88 on Tue, 12 Sep 2006 19:25:00 GMT

View Forum Message <> Reply to Message

yes, but until it's tried to PING you then it will still consider your nickname to be in use, so it could

be up to about 2 / 3 minutes before its freed up again.

That isn't mIRC. mIRC is a client used to connect to a IRC network. You will need to make your bot reply to the ping requests.

About the error, as you can see your nick has invalid characters, - is not allowed.

Subject: Re: mIRC

right ok, that site wasn't helpfull as it was hard to read.

looks like it cannot create a channel:/

but i can join an existing chennel.

last thing lol, how do i talk in the channel/set colors?

Subject: Re: mIRC

omg... of course you can "create" a non existing channel.. im pretty sure you are (again) doing something wrong.. just try "JOIN #bla12345".. it should work and it should not exist...

but all your questions are answered in the mentioned IRC RFC... and you just say it doesnt help...

so you just didnt read it, did you?

so open it again and read point "4.4 Sending messages".... for your "talking in channels" problem.. you will see the PRIVMSG command then.....

perhaps you should get yourself another hobby

i did already try that al else i would be posting here again.

also i did read that site and it is telling me what you are saying.

sometimes it will work sometimes it wont

There are plenty of pre-built IRC modules available, it might be easier to download one and use that to handle your IRC connection...

quick google search turned up this one for c++ (I think thats what your using?) -> cpIRC

but there will be loads of others if that does not suit your need. It just saves you coding the actual IRC interface, and instead you can just pass commands to it and get incoming messages sent to where you want them.

I used that for something, you have to do a bit of modification to the socket stuff to get it to work on windows.
