Hey, TS online works basicly fine when i join games, loads without a problem, but when me and someone else on my Lan go to play together in an online game, lets say us and 2 other people. Our connections refuse to connect to eachother and the game just freezed when the host hits start after we all accept and the game will not load until one of us on our lan disconnects somehow. Does anyone know what would cause this problem and how to fix it?

Thanks for anyhelp!

Have you installed the protocols (or whatever there are actually called) required for LAN play?

Try hosting a LAN game using Hamachi. If you don't know what it is, google it.

I have same problem. I connect to internet through same modem as my friend, but when we try to play through WOL, it does not work and the game ends only after one of us disconnects.
I tried to play on LAN through a lan cable, but when I click on lan, nothing happens.
