You're looking for a CCTF mod not a CTF. I'll go through my logs in a min to locate the URL for you.

The mod you are thinking of was was made by me, based off a mod that Jess created over two years ago. Unfortunately I do not have it anymore. But i did recently send it to spacer from fan-maps.com, he should have a version similar to it. Get it off of him ad I will adapt it back to the version you are refering to.

? Adding obelisk guns to engineers... are easy! You open renegade editor... objects > soldier > suldier_presets > GDI > GDI_Engineer_0, click CnC_GDI_Engineer_0, then Setting, scroll down to the "SecondaryWeaponDefID", click the 3 squares next to it (the yellow, red, and green one) and go to weapons_structors > weapon_obelisk, then click MX0_Weapon_Obelisk and click "Ok". Click OK again on the other window for LE and press the x. when it say's "You have modified the presets library. Do you want to save these changes?" Click yes, then go to the LevelEdit Directory, then click your mod's folder > presets and copy objects.ddb to your data folder in your renegade directory!

TGPaddy wrote on Sat, 22 March 2008 13:22i have a UltraCTF modewhich you didn't share in 2005, so why sharing it in 2008?

BTW, it doesn't matter if it has to be fixed in some parts, because players who are familiar with LE can do this on their own initiative.

So guys, for a good start with CCTF, here is the old one from XPZ=
