Some of you might know, I have been collecting stats on all the servers on the RenGuard network. The stats include your max player count and the current number of players in your server.

This spreadsheet is compiled from data from September 8th, 2006 until today. It lists the average player count in your server and the resulting percentage utilization of your server. (Example, if your server averages 8 players out of 16, then you have 50% utilization.

Please note that if you changed the name of your server then your data got split up into each name and I'll have to hand-compile your actual figure if you want it.

Also, please note that this ONLY works for servers on the RenGuard network. I don't collect stats for non-RG servers.

For reference, the top 10 servers for player population are:

name	avg(s.players)	max_players	percentage
n00bstories.com AOW/CCM	37.6384	40	94.096
n00bless.com All Out War	24.3332	32	76.04125
Jelly-Server [Mini AOW]	13.5967	20	67.9835
www.Jelly-Server.com	25.4081	42	60.49547619
-=[DW War Sniper]=-	5.1000	10	51
Fnfall's AOW Server	17.9662	36	49.90611111
~XpHaZe Marathon~	15.6052	32	48.76625
[DS] Black-Cell.net - Marathon	15.5245	32	48.5140625
-=[DW Train Server]=-	4.7652	10	47.652
-=[DW War Server]=-	5.1883	12	43.23583333

(I removed from consideration those servers that look like they weren't up for very long and therefore had skewed ratings. I'll probably run my query again with a record count so I know for sure which results are reliable.)

It would be interesting to run a correlation of "utilisation" against host names

OK, here's a better list of the top servers. I removed a few more that were only up for less than a day. The "Record Count" column represents how many stats I have for the server which is taken once per minute.

name	average_players	max_players	utilization	record_count
n00bstories.com	AOW/CCM	37.6380	40	94.095 75891
n00bless.com	All Out War	24.3339	32	76.0434375 73816
Jelly-Server [Mini AOW]		13.5998	20	67.999 44919
www.Jelly-Server.com		25.4129	42	60.50690476 108959
Fnfall's AOW Server		17.9689	36	49.91361111 75676
~XpHaZe Marathon~		15.6018	32	48.755625 35545
[DS] Black-Cell.net - Marathon		15.5271	32	48.5221875 75766
Fnfall's Marathon Server		17.1150	40	42.7875 73412
UNRULES.COM - New Maps		17.0991	40	42.74775 75446
Fan-Maps.net - CoOP		6.1347	15	40.898 43459

The stats for Jelly are messed up because they had both their AOW and mini AOW named identically which resulted in fucked data. In fact their utilization is definitely a lot higher. If I can figure out when they fixed the names, I can find a more accurate utilization stat.

Does this mean I can call you a whore without being bitched at?

This is cool, though.

lol go n00bstories.com

Just a suggestion... why not record them by server hostname, which is always different? You could still keep the title next to the hostname, but it would prevent servers with the same name messing up their data.

- 1) Gamespy servers
- 2) RenGuard doesn't keep track of host names.

In fact their utilization is definitely a lot higher. If I can figure out when they fixed the names, I can find a more accurate utilization stat.

When we launched our CP-maps server we had to change names for the Mini and large AOW. I don't know if you can look up the exact date with that info, else it has definitely been 1 month ago.

Could these stats be hosted/updated too? I find them very usefull, very nice!
