Here are two pics of what happens when i attempt to start RG.
i don't hate a 64 bit chip (P4 HT)
it has worked for over a year on this comp.
Norton is not the problem.
Could be windows updates, not sure, but is not KB917422.
have installed the "patcher" thing i found somewhere. did not help.
Any help would be greatly appreciated.
Ty

It's the darned kernel32.dll exception again... It seems that you DO have an EM64T-equipped CPU m8

you're kidding lol...
ok. but it has worked in the past..so how can i make it work now?

have also discovered that it is not the fact that I'm using First Decade. i reinstalled the regular Renegade, and still no luck. Same errors. Patched it, no luck.
Go RG!!...

It works fine on a 64 BIT CPU with 32 BIT OS incidentally. Don't even ask how I got into this mess.

they're telling me that's what i have, assuming Xp is a 32 bit OS.

how does one fix this...where's this 1.04 that was due out "in a few weeks" last febuary...

I'd advice you to go to irc.n00bstories.com/renguard maybe they can give live help.

RG 1.04 is delayed a lot due to a lack of a coder finishing what he started. Don't blame that coder though, he's a volunteer and prolly has a lot of other stuff to do as well.

i dont' want to blame him i've done my share of coding and it sucks ass. I'm just saying that there shouldn't have been any hype over 1.04 2 years before it came out.
to irc.n00bstories.com/renguard i am.

There's the catch, some copies of XP are 32, and others are 64. I know mine's 32 bit, RG still works.
