What he's trying to say is:

klote2314Hi, my modifications are not working correctly. I have set the light tank to shoot the obelisk weapon and it will do the damage that the building does, but it will fires the tank shell, not the triple beam it normally has. Also, i tried to make the chaingun fire the rounds normally used by the obelisk and personal ion cannon but that is failing too.

Help would be appriciated.

I am helping him on this modification but this has stumped me too.

This has been fixed, i changed the ren directory in the registry.

Edit for quote after merging topics

klote, please do not post multiple topics asking for help.

Edit: I merged two of your topics that you still need help with or might be useful to others.

yeah i alreedy appoligized for that
in athor topic
read under

mehh sorry for double posting ma computer got stuck and i thought iit dint post the athor topic sorry
bout that

ok ill give u some more information about the problem

me and merovingian tryed to make a tank fire ion lazer instead of a normal cannon but it aint
workin we did every thing we changed the presetss the ammo the war head its still not workin
some one tell me do i need to add something else ore what

depends on weather you are trying to use the preset for POV or ion cannon strike.
