I am looking for someone who is better with graphics than I am who can make me some overhead view map pictures much like this one of Walls:

<http://users.tpg.com.au/jfwfreo/walls.jpg>

I have tried myself to make screenshots for other maps but I am unable to do so, my graphical skills are too crap

Sk if he wouldnt be such an evil can do it highly for you with his w3d hack.

But if you want I can send you some 884x884 Pics of some maps.

Open the w3d in w3d viewer and make a printscreen of it, or, import the w3d into max, texture it and render it.

I can see the light emitters in that pic, that's why i said use w3dview, it won't show the light emitters in the tiberium (and elsewhere).

Here are a few:

I skipped the maps "Under" and "Glacier" because they have rock cover over them and it wouldn't look good for a map.

Thanks for those textures, they are pretty good.

Hourglass for example is great.

However, I have just realized that there is a better way to do it by using code similar to what the encyclopedia in SP uses

Your images are great for help with getting some size and scaling right though (so they definatly arent wasted)

I think Roleplay 2 should use the new radar thing for their map.

Those are some great pictures, but the edge parts should be blurred so they don't look so unnatural.

As for Rp2 using the overhead map, it's a great idea and I'll try to implement it when this becomes available, but the picture will be one bigass texture.

I recommend maxing out the graphic settings and turning on antialiasing when making those overhead shots.

easy way would be to center the camera at 0,0,0 in LE and increase view distance and go up in the Z axis only, to get a accurate image for the radar.

can someone do the same thing for me please.

i need them all to be the same size preferably 800x600

Go ahead and use them, just shrink them down in ms paint.
