Hi there,

I'm wondering if someone knows a script to show server info on a website. (online/offline status, player status, map etc)

Thanks in advance,  
Robin (a.k.a. DodgeThis)

I already requested this plugin on the new brenbot 1.5.

DP promised me he'll make it sooner or later

There are some others out there already but they're harder to configure; I think.

brenbot can send the infos to gamespy/ase/homepage...all you need is a script what can read this and the gamespyqueryport von brenbot

<http://www.next-generation-gamers.org/aow/aow.html> this infos come from brenbot

Well that took all of 5 minutes to find it:

Quote:FDS\_PostInfo - Version 1.1  
Author - Tom "Dante" Anderson

Fixes:Changes in 1.1

Fixed an Arithmitic function problem that was causing some IP addresses to error out.  
Changed the Interval from minutes to seconds, I would recommend changing your time before starting it up.

```
*****  
*****
```

Use this program to display your servers current game\_info on a web page.

This application will HTTP POST the game\_info and your remote admin pass to a web page, you can use the remote admin pass to error check to see that it isn't being spoofed, or just omit it (for the example i used this method).

To install, simply plop these files in a directory with the fdstalk.dll (you WILL need the .Net framework available from Microsoft Windows Update ([www.windowsupdate.com](http://www.windowsupdate.com))).

Then open up the app, set the settings, and you are good to go, just click on File->Run and it will update to the specified web page.

You will need to have a file that you specify from your upload page (example is stats\_upload.php) that is 777 so that the stats can be written, or just dump to a db, however you choose.

INI File Explained:  
[Settings]

Remote admin IP from your server.ini or gamespy.ini  
RemoteAdminIP=127.0.0.1

remote admin password from your server.ini or gamespy.ini  
RemoteAdminPass=33333333

remote admin port from your server.ini or gamespy.ini  
RemoteAdminPort=5000

local port to use for the UDP remote administration (fdstalk.dll)  
LocalAdminPort=5003

how often it updates in minutes  
UpdateInterval=1

optional message to display when it updates  
NotThereMessage=Updating Server Stats...

page to post the information to, see the included php files for protocol  
HTTPPostPage=[http://www.renevo.com/renfds\\_stats/stats\\_upload.php](http://www.renevo.com/renfds_stats/stats_upload.php)

Any problems, just check out the RenEvo forums and ask away (<http://www.renevo.com/>)

I uploaded the script and put it here: <http://www.dodgededicated.eu.tt/stats.php>

But: it's still not showing any player info

Does somebody has a script which does?

the player name is are missing and the points...the script on my page can this display and the  
renguard info

<http://www.renegade-community.net/aow/reserverstatus.html>

all you need is brenbot (1.41 or higher) and the queryport

Dodge what filesdid you upload to your webserver. I can't get this to work though I once did...bah

I don't really remember where to put everything. The instructions are vague.

I first edited the file /stats\_upload.php and changed the settings (just change the remotepass)

After that, I uploaded the files from the map ./web/ to my webserver and CHmodded

/stats\_upload.php it to 777...

then followed the instructions for the ini file and clicked on file>run.

And i recommend you to empty the box with the message which will be send to the FDS, cuz else it spams like every 1-10 secs a message

If you want to view your serverinfo just go to <http://yourdomain.com/stats.php>

Creed3020:

Hey thanks for the file.

I was looking for something like this for a while. I seen it on another website a long time ago and was looking around and never did find it.

Works great. Your right about the spamming message, thing is outa control.

<http://www.tonyroldm.com/renegade/status>

Thanks again..

Tony

well its not his script starfox wrote this so he is not allowed to share it ...

Ive got a nice one from cat998 (some months ago)

as a example it works for wolspy and the brenbot thing:  
`http://ren-hq.de/query.php + "?ip=IP"` and if its not the standard Queryport(25300) add a  
`"&port=12345"`

some examples:

`http://ren-hq.de/query.php?ip=80.154.37.197&port=25300`  
`http://ren-hq.de/query.php?ip=213.133.97.60`

True it doesn't display the player info but it's a nice snapshot of what map the servers on and the player count. This is what I was looking for. (it only executes the game\_info not player\_info)

I was thinking that too many commands being sent to the FDS every 30 or 60 seconds could effect the FDS output when high player counts are in game.  
Sometimes simple is better.

Tony
