Hello,

I run Renegade server on Windows at WOL. Now i want it for GSA to. I found something named wolspy but It seems not to work properly. Reading some topics I see that some users say that I dont have to run WOLspy to run on both WOL and GSA in same game.

But how is'nt told in the topic or i didn't seen it.

Can someone advice mee or give me a link to the answer of my question??

Thanx

Greetings Rene

Pick XWIS or Gamespy, Or use WOLSpy to have your server appear on XWIS and Gamespy.

You can post a topic explaining you're troubles with WOLSpy and i'm sure a few of us here would like to help.

To setup WOLSpy you need to use version 1.1.0.22.

You need to configure your server.ini file in the FDS with the appropriate port settings:

```
GameType=WOL
Port=49510 (example port numbers)
GameSpyGamePort=53200
GameSpyQueryPort=53400
AllowRemoteAdmin=True
RemoteAdminPassword=password
RemoteAdminIP=127.0.0.1
RemoteAdminPort=54200
```

WolSpy should pull these values in when you run the setup.

So when you start the RenegadeFDS program, then you run the WOLSpy and it will connect to GameSpy.

Hope that helps.
Tony

If you need WOLSpy 1.1.0.22 you can get it from the link below.
<http://www.tonyrolm.com/renegade/RenegadeFDS/WOLSpy/WOLSPYBuild22.exe>

Alex wrote on Thu, 21 December 2006 14:59Pick XWIS or Gamespy, Or use WOLSpy to have your server appear on XWIS and Gamespy.

I was busy on wolspy. I can only play on Gspy then. En when i read diagnostics on the screen the everything is false. But I will go on
Thx

I wil put server ini in topic later, Like that it works on wol. Maybe u can see somthing. Some ports I use different ones.

Thx
