Alright I have 2 problems:

1) When I Use FDS and start up everything the FDS window comes up and everything is running fine until it says "Creating Game Channel..." and about 10 seconds later it says "Failed to create channel" then it does that over and over until the FDS crashes. What do I do?

2) How do I configure BrenBot? The answer to that or a link to a Brenbot tutorial would be nice(the link on the Brenbot site doesnt work.)

Thank you ahead of time.

I think the first problem means you don't have a valid username and password or serial. For the serial you can use your renegade client serial (the one you use to install Renegade).

it helps if you tell us what exactly you are having problems with? A specific command not working, players not being listed, not showing game info, not connecting to irc? There are loads of things you might be having a problem with, you need to be more specific.

Screenshots help as well.
