Edit...

I didn't realize it got released. This topic has now turned into a plea for help. See below.

So he did release them. Thanks for the link. Exdeath, if you read this, I'd like to know if you are planning on rigging any other E3 models... like the harvester and flame tank.

Well, I got the E3 Buggy to work... (which is surprising, since most of my Renegade modding knowledge has deteriorated) but it has some nasty issues. The suspension seems screwed up, but I never touched the physics.

Right here you can see how it's too high.

The wheels get stuck under the terrain very easily.

It seems like the bones are placed incorrectly, but I'm not totally sure. They may be like this on purpose and the reason could be something else. I don't know too much about boning - I've only done it once.

Can anyone please elaborate on this so that I could attempt to fix the problem?

Those old Ren textures are ugly as shit. Same with the weird square engine.

The buggy is one model I'm glad they remade.

You will have to rebind the yellow suspension pieces.

Aye, it's great to see them being used!

On the animation slider, change it to frame two and re-export the model. That should fix your problem.

I'm not sure how I missed this posted when I check the forums yesterday. I could rig them up, write a tutorial while I'm at it.

Wow, that was a simple fix... thank you.

And thanks for replying, it would be sooo neat if you did that.
