my FPS is between 12 and 20 and it was not like that before one dya it just went like that no updates or pc changes  
my pct=  
windows xp sp2  
AMD athlon 64 3200+  
1 gb memory  
nforce networking controller ethernet card  
or somthings like that  
i got a nivida geforce fx 5200+ video card  
i got all my pc updated i got the graphics i got the laste direct x  
i got reneagde with the TFD pacth 1.2 or somthing i got rengaurd with cp1 and cp2 and the latest scrips  
i think that covers it please help me it jsut one day i had FPS=60 next day it was 12 i re-ddi my pc i wiped it out but it stays the same

What do u mean with "latest scrips"? Scripts 2.9.2 are the last really stable version. U got an old video card, I don't think scrips 3.0+ would be good for u.

Quote:i got a nivida geforce fx 5200+ video card

I would probably point at that first.

Yes, but was that with the extra shaders and stuff added in scripts.dll 3.0+ ?

Try disabling shaders in your Renegade Options (Options -> BHS.dll Options), restart Renegade and see if that helps your FPS. If it does it's likely your card simply can't handle the shaders in 3.0 +

---

---

I'd no doubt say the same, your card is most proberly struggling to handle the scripts.dll 3.0
