hi everyone, I've always had problems with renguard. such as: I got renguard working completely fine, but when I start up renegade renguard automatically closes and disconnects. but that's not the problem I'm here for.

now, I'm having problems with finding the place where I should install renguard.

<http://i136.photobucket.com/albums/q165/girraf/renguardproblem1.png>

(this is the default place where it installs)

<http://i136.photobucket.com/albums/q165/girraf/renguardproblem2.png>

(this is what happens when I press next button)

can someone please help me?

Try replacing the text "C:\westwood\renegade" with either:
"C:\westwood\renegade\
"C:\westwood\renegade"

One of them should work. I got this once, I can't remember how to fix it... :s

EDIT: yes, I am aware that one of those is the same, but... that's what did it for me, IIRC...

I managed to do something, it didn't solve the problem very well, but it's good
