What are you trying to do? Are you trying to get mIRC to connect to an IRC server? Are you trying to make an application connect to an IRC server?

i am, Sbot now fully supports IRC

i wanted to use telnet so i know exactly how it works. what the output is like etc...

this was my moment of glory <http://www.dansprojects.com/WORKING.png>

it turns out, it was working all along. but i needed to put a newline at the end of each command .

Telnet IS TCP lol, raw TCP connection.

I think cat just means it is a "raw TCP" connection as in "nothing telnet specific added". It just opens a TCP connection and lets the user enter the data it should send over that connection. It isn't a special way of connecting or something like that, I think that's what confused you.
