It would seem that you already have a WOLspy up and running. If this isn't the case give me a few hours and i'll look into it in more detail.

If your running the latest BRenBot beta it could be the BRenBot GSA broadcaster binding the port.

[12:03] <ViPeaX> !version

[12:03] <VPBot> I'm running brenbot 1.41 MSWin32.

[12:03] <VPBot> brenbot is Copyright 2003-2005 by Blackhand Studios. All Rights reserved.

In that case it's probably not BRenBot, that's a fairly old version now. Look out for an updated version released in the next few days which will replace wolspy anyway.
