I have made a few server side mods, but i wish to edit City Flying and walls flying. But they do not come with the multiplayer .lvl edit files, just the walls and City.

Can anyone help me get the walls flying and city flying .lvl edit files?

In the presetlist select:

Terrain->Levels Multiplayer->C&C_Map_City_0325f->C&C_Map_City 0325f - ramps
"make" it

Same for "flying includes" and "flying collision"

Save the level AS C&C_City_Flying.lvl then you can use the
lsd,ldd (and ddb if you temped spawners) in the City_Flying.mix

[edit] Load C&C_City.lvl and then "make" the above..

Also, reborn created the levelfiles for C&C_FieldTS and C&C_Snow
you can download them here.

When you decide to edit these serverside you cannot replace the lsd file in the mix.

You don't use the .lsd that is only if you make a .pkg outa it.

And make sure you name the level when you save it c&c_city_flying or you will just crash your
server.

Dont wanna bring back a dead topic, but its already here...

I followed what was stated. But I have 2 problems.

1. The NOD airstrip waypoints dont work.
2. Unable to purchase flying vehicals, they show up, but they dont spawn.

I'm not sure the correct name of the zone, but did you put the airstrip landing zone over the
airstrip's pad?

(Don't ask where it is, I havent done serverside modding in a while)

Waypaths don't work serverside unless you include the .lsd file, but, sometimes the doors fuck up
when that file is included and won't open (you 'lag' through them, because they are open for the
server).

it all works when its walls, but as soon as I "MAKE" the things under the "terrian" area to turn the map into flying the waypoints dont work, but they ARE still there.

1. The NOD airstrip waypoints dont work.
2. Unable to purchase flying vehicals, they show up, but they dont spawn.

let me explain #2 a bit more..

the purchase terminal selections for them show up, money is taken away but they do not spawn, they do not show up in the weapons factory, nor does the cargo plane drop them off for NOD.

^^ What he said!

EDIT: >.< DOUBLE POSTER...You posted that second one 2 minutes after the first one...Just hit Edit after you've copied the quoting bb code....

EDIT #2: You need to put a script zone for the vehicles to spawn at....Wait, didn't I say that earlier?

EDIT #2: You need to put a script zone for the vehicles to spawn at....Wait, didn't I say that earlier?

i dont think you guys are understanding me...

I will post a picture if I have to...

I start with C&C_WALLS.LVL

I add some spawners for the hell of it. Save it, take the objects.ddb and the ldd file and put it into DATA. everything works.

I go into Terrian>Levels - Multiplayer>CNC_Map_Walls 0325f>

and I "MAKE" "Ramps" "flying includes" and "flying collision" following everything that is in the 2nd post of this topic.

But what about the "Includes" and "terrian" things??? what do I do with them?

Save as C&C_Walls_Flying.lvl (ldd and lds are automatically created)

now, after changing those three things, all waypoints for the airstrip are still there as they were before, and all vehicles except for the flying vehicles build.

I look through the script zones and there is only 1 for "Vehicle Construction" and I am guessing that means all vehicles.

so what am I not understanding? please tell me because I don't get what you guys are telling me since they are already there.

EDIT: >.< DOUBLE POSTER...You posted that second one 2 minutes after the first one...Just hit Edit after you've copied the quoting bb code....

and that was uncalled for, everyone does it from time to time simply forgetting about the edit button.

Ohh, here is a picture of the script zone and waypoints.

As for this....Yea..I apoligize..I was a little bit tired when I made that edit and a bit squirmy myself
(We all get that ways sometimes...).

I'm going to stop responding because I really dont know wtf you're talking about for the reason
mentioned above....

Merovingian wrote on Sat, 21 April 2007 21:07Waypaths don't work serverside unless you include the .lsd file

Thats not true.
If the waypaths dont work you
1- misplaced the Car thingy
2- the first waypoints are not "dropped to ground" and inside the vehicle construction zone
3- you didnt place (enough) "Human" pathfind generators.

Waypaths are 100% serverside.

--
If you cant buy flying vehicles, go to "Edit -> Level Settings" and select "Allow Flying Vehicles".

and select "Allow Flying Vehicles".

Thanks for the help but I am still having problems and questions.

First problem is the flying vehicals, I know exactly where you want me to go, but when I click on
"Edit>Level Settings" LE crashes...

The other is a question. What would change with the transition that would make the waypoints
stop working? like i said before, they worked 100% when it was just plain C&C_Walls but when I
changed those 3 things to make it flying they then stopped.

sorry i know im a pain, but thanks for all the help everyone.

EDIT:> BTW im having the same problem on City Flying, thats why the following pics are from
City Flying.

Ok, i took a look at the waypoints a bit closer, basically thinking it was this.

- 1- misplaced the Car thingy
- 2- the first waypoints are not "dropped to ground" and inside the
vehicle construction zone

and I dont see anything wrong, so here are screenys.

See image.. like that it *should* work..

To fix the leveledit crashing when trying to use "Edit>Level Settings" you must right click on leveledit.exe goto properties and enable compatibility for windows 98, disable all visual themes and turn off advanced text services.

it still dont work...

also, what script do I use to make the guard towers and turrets not shoot at aircraft???

i only want the samsites and AGT and Obby doing it (actually I would like for the AGT and Obby to not do it, but i feel i would get too many complaints..)

Okay, you must put the waypaths and death zone on the ground, the vehicle can be created in the air, just raise the death zone.

Also, the flying vehicle this is caused by not checking allow flying vehicles in level editor, it has been occurring ever sense jonwil implemented his new purchase method.

so lets say I take everything away from there, and redo it by hand.

Redraw the waypoints, all three of them, in the buildings area find the Nod Airstrip and put that little #> down on it, and then CTRL+P the little car to face away, then put the build area and it should be done?

i mean, i dont understand what changes when i selected those things in the terrian area to make it flying... and yes i also go into level settings and check enable flying.
