Hi there,

today i reinstalled Renegade with the latest updates and renguard.

The Problem ... i can play until anyone plants a superweapon beacon or the superweapon starts ... then the whole game crashes and in the next second the computer restarts.

Anyone please could give me a tip to solve this problem?

Things i already tried:

1. Read much in different forums
2. use a tool for the latest directx

My Computer:
Intel Pentium 4 3,2 GhZ
Asus Mainboard
RAM: 1GB
OS: Windows XP SP2

I dont think that this problems comes from the os or any hardware because the game is running smooth when no BEACON is planted.

Thank you very very much for your help.

Yours
Hannes

Try re-installing Renegade (Uninstall first) Then Download the patch from in-game then download Renguard and install that. Should do the trick.

I used to get this on my work pc @ work.

Same specs too tbh, lol.

Nothing can fix it.

Is your pc a gateway?
