I dream about a program, which change you in the right NOD or GDI Channel on Teamspeak. It looks our nick ingame and search it in Teamspeak and change you to your Team Channel on Teamspeak.
Does anybody write such program?

Blazers ts regulator thing has been around for a good while now.
not public though

I was halfway through writing an NR plugin to do this, among other things. Never finished it.

I havn't worked on it this week as last weekend I hit a snag with a function that just wouldn't work correctly for no reason at all, which drove me nuts. I will probably work on it some more tonight or this weekend. I'd say that it's 70% complete at the moment.

I'm developing it for 1.51 on Win32, but it should work fine for LFDS as well.

Sounds very good
I stand here for beta testing the script
Maybe i can fix a problem
One question: brenbot 1.51 is not out for normal people, can you write the script fpr brenbot 1.50, too?
thx blazer

I can help you to clean the code and i can help you to make it runing for brenbot 1.50 as a plugin.

Sende it to me and i make it, or have you finished?

Hi everyone,
any news about BrenBot 1.51 or the TS Module ?

I thought it's better than open a new thread.
The last LFDS Version from BrenBot I knew is 1.50
