When you type the "Win <0>" or "Win <1>" Nod Always wins. I'm not too sure if thats fixed in the newly relesed one, I'm Downloading it now, but just felt to report it. Please tell me if it depends on the "<>", I just figured that since it says to do so in the console.

1. This is a scripts.dll feature, not Renguard, so I am moving this to the Other forum and notifying jonwil.

2. When things are enclosed in brackets, it means that is a parameter and should be typed WITHOUT the brackets. So the proper syntax is: "win 0" or "win 1".

Note: Your report is still valid though as it shows lack of proper error checking. I havn't looked at the code but I assume that it just checks to see if the parameter is a 1 or true, and it assumes false for anything else (including "<1>").

Yes, you are supposed to type it without the brackets.
If it still fails without the brackets, let me know and I will fix the bug.
