im running winXP, in a 3.2 pentium, geforce 7600gt fatality, and 1 gb ram.i have the latest drivers and direct x 9.c the august version i thnk.

the preblem is taht im playing normally, with my lag and that stuff, at 60 fps but then it turns to 2 fps, then 1 fps, and 0 fps...so i cant even move. I've only changed the nod textures and some sounds, but it happened before with a geforce 6600. last renegade version tho, with the renguard compatible crack

H3LP

RenGuard compatible Crack? o.O That got me, lol.

tried turning your pc off for a few good hours? giving your hardware a chance to cool down?

If you have done that and it's still happening, you might need a new graphics card, or just new fans!

Rneguard compatible crack probably ='s No CD patch.

Err... all I can think is that some bit of game data is corrupted. Does it happen whenever something particular happens, like say... someone buys a medium tank and then it breaks or something?

Hmmm, try wating for a bit before getting in the vech (if it's new, you can get thrown into "blue hell" if you enter a vehicle that hasn't finished spawning yet)

ill try that, and something important that i didnt tell.
the version is from emule, my CD got lost when i gave it to a friend of mine

Yeah, that could be a problem. The game is about \$5USD; go buy a new copy.

CarrierII wrote on Sat, 03 March 2007 17:50I can pick it up for less than that.

Well, of course, but \$5USD is the average.

Ermmm if u have it when u enter a vheicle and only rarely, then it's probably the blue hell (but then without blue). When it happens, u should try to quiet the game and rejoin and it should be solved. It's a well known ren bug.
