I admire the work the person who made it put into this, but its a whole load of crap.

You can see in the image, the earth is getting smaller, and everything is getting squished up.. If you take away the water, you would have land everywhere, if it gets smaller, (the opposite of the thing it said it is) we won't have any water, so we have many more things to look on.

- 1) Global Warming (which I don't believe in)
- 2) Global Dimming (I do believe in)
- 3) Earth growing (doubt it, maybe dead people and more people would consider on the mass of the earth, but not the physical size)

Im high as hell right now, I don't know if any of this makes sense so

Dead people wouldnt contribute, we are made up of things that are already on the earth. Plants take things from the soil, then we eat the plants, die, and turn into soil. Its a cycle,the only time the earth's mass would increase is if something crashes into the earth.

It would be getting hollow in this depiction, not magically getting more matter.

Well most of what he said is shit, but he could be on something about the Earth getting bigger.

But any chnge in size in our world would take millions of years for anyone or anything to notice.
