I downloaded the CTF maps from cncnz.com Extracted the Scripts files to the Renegade Folder and the .mix & .thu files to the Data folder, but They don't Even Appear in the File Window. I searched them and, yep, windows says they're there, but they are invisible or something. I checked the Attributes and they're not Hidden Files so Whats Going On Here? They Also Dont Show Up In Host game part of Renegade.

Check and see if they created a separate folder when you extracted them. I think when I extracted them they created a new 'data' folder in the Renegade\Data folder.
