Hey guys. I've decided to make some skins for my personal use, but I need a .dds extractor. And no, I'm not thinking of XCC, it still won't work on my comp no matter how hard I try. There was this other one, but I forgot the name. The name went "Ren-something", I can't remember. If anybody finds a link, please post it. Thanks.

Yesterday we from TSB set up a server for TSB\_InstaGIB the server is 4 vs 4 without lag (for european ppl)you can joit it by ASE or Gamespy or Ren IP[TSB]Instagib tsb-clan.tk|32ms|195.64.94.158:4848The server is hosting Instagib Version 2.0c that comes out @ sunday... the problem is a verry buggy map in this Version and it is not smart to host this map...We are looking or we going to work on the mod again but nothing is sure.The V2.0c is an old package we create a year ago but we never putted it online, and now we will...So all check our website [www.tsb-clan.2ya.com](http://www.tsb-clan.2ya.com)when everything goes like planned it is online @ sunday.BTW: with TSB version 1.0b you can visit ourserver to but you can not play all maps...//Poost [ January 24, 2003, 23:45: Message edited by: [TSB]Poostmen ]

Yeah.. I tried XCC and it WON'T stop crashing on me... I just went to <http://www.cncnz.com/downloads/renegade/utlils3.shtml> and got the Renegade mix file unpacker...

---

it'll get EVERYTHING out of a .dat or .mix file all at once. Much easier than using RenegadeEx...although it DOES eat up a lot of room, and some time, to unpack always.dat all the way.

I guess this is solid evidence that WW is doing their job as far as moderation. I had a post deleted. ANYWAYS. I'll just repost what I said in a fashionable matter. killakanz, I already said I won't be using XCC. Do yourself a favor and re-read the post.
