This isn't C&C related but imagine the possibilities of something like this with gaming...I imagine with RTS style games it would be even better. The video is about 10 minutes long.

Seen that somewhere else before.

Great little tool and i'll probably get one for my 3D work (if it supports it).

I've seen a video on that thing about a year ago, but never heard about it since and thought it never really took off or something. Great news.

edit: nevermind, this video dates back to February 2006.

Yeah that's what I hate about that stuff, you see it, you want it and then you never hear about it again. Just like that projector game that let you interact with the objects that was posted on here forever ago.

I hate touch pads, I don't want to actually move my hand the distance that I move the object (my mouse moves across the screen in about 6 inches).
Plus you couldn't rest your hands on it.

I would actually love an interface like that. Wonder how repairable it is when it breaks though O_o

Plus you couldn't rest your hands on it.

You must be very lazy then.

No offense but if you were going to be able to see everything you wanted to you would have to have a huge screen. And fingers are not exactly precision instruments.

I don't think it's as much of a problem as you think.
