Posted by [jnz](#) on Thu, 12 Apr 2007 11:07:47 GMT

[View Forum Message](#) <> [Reply to Message](#)

I notice a lot of people didn't even know i started this project (a few months ago). So, I'm starting a new thread.

SEye is a project that allows you to see a top down view of the map. It *will* be release working real time. although, it should work with gamelogs as well. Don't jump to any conclusions before you post, i know people will, i have already been flamed.

Alpha: <http://www.dansprojects.com/Seye/Seye.zip> (This wont work as the newer version needs to be uploaded)

[View Forum Message](#) <> [Reply to Message](#)

No, SEye is a program that views your server. although, you have to install a mod on the server so other people connect to it.

I'm currently getting it to read gamelog. but i think this is not going to be possible / very hard.

so, i am going to make the server produce a log. that the SEye can read. I am also going to make the client make a log too, so you can watch it again.

Err, sorry to ask, but what's wrong with reading the gamelog? As long as SSAOW / SSGM is setup to archive each maps logfile to a separate file (the option was originally intended for renhawk) I don't see what the problem is...

It seems pointless creating yet more logs...

SEye uses data that isn't provided in there, i could change it to use whats given. that would be hard work.

I found a way to make SEye export images.

Enjoy! <http://www.dansprojects.com/Seye/Seye.zip>

gamemodding wrote on Sat, 14 April 2007 14:15things like player ids, player health percentage (this can be worked out from the info, i know). translated preset names, game name, map name. some others...

Coming back to this point a minute, the option to archive logfiles saves them in a file beginning with the name of the map. EG: Gamelog_C&C_Canyon_<Date>.txt or something like that. Just FYI.

Subject: Re: SEye

[View Forum Message](#) <> [Reply to Message](#)

The most critical thing is the player ID, instead, all i got is the object ID. While yes, i can use it, it just makes everything 10x harder because i already to programmed the paint event to draw player IDs not object IDs.

Subject: Re: SEye
Posted by [danpaul88](#) on Wed, 18 Apr 2007 16:29:37 GMT
[View Forum Message](#) <> [Reply to Message](#)

IIRC there is a function which converts object ID's to player ID's really easily.

Just looked in one of my script files;

```
int playerID = Get_Player_ID ( Commands->Find_Object ( objID ) );
```

So if you ever add support for gamelog reading in future, that will solve the objid / playerid mismatch.

Subject: Re: SEye

[View Forum Message](#) <> [Reply to Message](#)

I don't have that it gamelog, or SEye.

Subject: Re: SEye
Posted by [danpaul88](#) on Wed, 18 Apr 2007 16:31:54 GMT
[View Forum Message](#) <> [Reply to Message](#)

Sorry, forgot it's not built into the scripts.dll... stupid suggestion after all

Subject: Re: SEye
Posted by [jnz](#) on Wed, 18 Apr 2007 16:34:43 GMT
[View Forum Message](#) <> [Reply to Message](#)

Although, the only reason it uses the player ID is so when the player dies (or is destroyed) the ID doesn't change. This is logged in gamelog, so i suppose... but i would have to rewrite the player part of the paint event and the player part in scripts.dll to match the vehicles and buildings. give me about an hour and ill see what i can do.

EDIT: Merovingian did 3 more maps last night, replacing my crappy field.mix. the total map list that now works are:

- Islands
- Hourglass
- Field
- Complex
- City_Flying
- City
- Canyon

Can someone estimate a general size for the gamelog? i was pretty much going to load it straight into memory and read it like that.

I will for now, although if i get a bad response i will change it. Loading it into the memory just makes it easier for me.

Subject: Re: SEye

[View Forum Message](#) <> [Reply to Message](#)

Erm... gamelogs can be around the 100mb mark depending on the size of the server, it might be better to parse it line by line..

Perhaps run through about 20 seconds worth of data, then pause until the animation catches up to about 1 second behind and scan ahead another 20 seconds, so you are always between 1 and 20 seconds ahead of the animation.

Another possibility is having some kind of application to remove redundant data from the gamelog and save it to a new file. For example, if you 5 position lines for a player and their health stats didnt change on any of those lines you could remove the data and have it programmed to use the last data read in. That way you only read data which has actually changed since the last data.

So the lines

```
Quote:[17:20:28] POS;SOLDIER;1500000210;CnC_GDI_MiniGunner_0;67;-63;0;0;100;100
[17:20:29] POS;SOLDIER;1500000210;CnC_GDI_MiniGunner_0;68;-64;0;0;100;100
[17:20:30] POS;SOLDIER;1500000210;CnC_GDI_MiniGunner_0;69;-65;0;0;100;100
[17:20:31] POS;SOLDIER;1500000210;CnC_GDI_MiniGunner_0;70;-66;0;0;99;55
[17:20:32] POS;SOLDIER;1500000210;CnC_GDI_MiniGunner_0;71;-67;0;0;99;55
```

might become

```
Quote:[17:20:28] POS;SOLDIER;1500000210;CnC_GDI_MiniGunner_0;67;-63;0;0;100;100
[17:20:29] POS;SOLDIER;1500000210;;68;-64;;;
[17:20:30] POS;SOLDIER;1500000210;;69;-65;;;
[17:20:31] POS;SOLDIER;1500000210;;70;-66;;;99;55
[17:20:32] POS;SOLDIER;1500000210;;71;-67;;;
```

That way you could get some level of compression on the file sizes. Also since the object ID always refers to the same object you could remove the SOLDIER part as soon as it's been

associated with the ID by the CREATED event...

[View Forum Message](#) <> [Reply to Message](#)

I had a feeling it was a bad idea.

The way SEye works, it has a timer that updates the field every 100 milliseconds. All it does is invalidate the frame the main field is in, this causes the program to redraw it. In the paint event, it reads from 3 arrays, building, players, and vehicles. and displays the info, so it is all separate.

Now, by reading more data than needed wont affect the CPU usage, unless it is reading from the socket and has to split the data by a delimiter then parse each one. Just one, can cause a "traffic jam" and the whole program will freeze and .NET will shut it down. This will be very rare and only occur on people with slow internet connections.

I can get it to read gamelogs line by line, it's just like i said, harder. I can get every line of a file into a String array with one function call. No instances needed. In this case, i need to create and instance a read from it.

The harder part i am worried about is the timing, because, if i read it at my own speed it would be going alot faster or slower than it should. My salvation in this is gamelog provides the time that the data was logged, so, i will need to read ahead 1 line, get the time take the current line's time a take away and wait for that amount of time before i progress. Sounds simple, although, i have no idea how i am going to do that yet.

Do you think i should create a "converter" for the gamelogs to make them smaller and easily SEye readable?

Subject: Re: SEye

Posted by [danpaul88](#) on Wed, 18 Apr 2007 22:29:36 GMT

[View Forum Message](#) <> [Reply to Message](#)

A converter might be useful for allowing players to download replays etc, as their file size could be reduced by 50% or more...

Anyway, I am sure you will come up with a suitable solution for parsing gamelog files, I was simply offering some thoughts off the top of my head for your consideration

I'm sorry for the lack of updates, i have been locked out of Matix's box by his side kick David.

Anyways, while i am waiting i created a server (on my computer), i created a player list. It is a check box and pops up a new window. I also added Owner. Dave Anderson created the new logo here's some SSs:

Hehe, Nice to see this project coming along very nicely.

Subject: Re: SEye
Posted by [jnz](#) on Sat, 21 Apr 2007 18:59:31 GMT
[View Forum Message](#) <> [Reply to Message](#)

2 things.

- 1) My password got changed to the box again, and my session ended (so the server went down again).
- 2) The formula was incorrect, when the screen changed the positions on the map went at half the "speed" in relation. With a few changes to it, to include the screens height and width it now works correctly.

I'm going to create a php image script to tell you when the server is up and whatnot.

I gotter reconfigure all the maps as well -.-

Subject: Re: SEye

[View Forum Message](#) <> [Reply to Message](#)

Updates

- 1) People now enter and exit vehicles.
- 2) Adding builings one by one (this is taking hours to do each map).
- 3) Mouseover on the buildings.
