Did you install the Shared Internet Components when you installed Renegade?
Or, did you install an older game such as TS after you installed Renegade?

Try to run the file "wwconfig" located in your renegade folder , adjust some settings and press ok.
Helped for me because I had same problem after I had to format computer

after I had to format computer

WWconfig has nothing to do with WOL. Its a program to change your display/sound settings
outside of the game.

Reinstall renegade and when it asks do you want to install Shared Internet Components tick the
box. When its finished installing you should beable to connect to WOL.

This trick really works my friend had the same problem after he did a format C today I told him this and it worked , I know WWConfig has nothing to do with WOL/XWIS but I think its just a glitch but it gets fixed by accessing WWCongfig and click ok

btw couldnt find an edit button o.o
