The easiest way to get renguard to work on your server is by installing brenbot which includes it.

<http://www.renguard.com/community/> for a motd (u'll need to register)

or you could make your own bot and kindly ask for the rg protocol

Lol..But BRenBot is probably your best bet for RenGuard servers. BIATH would probably work as well, although I havent had time to test it for myself...

-Thanks,
MathK1LL

Well very simple, you goto www.renguard.com and register there for mod id , you will then be provided with a motd id something like 1276643298, you then put that in your cfg in the motd id and tada.
