First, may I suggest .jpg image files? My bandwith is limited, not helped by ~1400 MB of Linux
Installer images (I needed the other disk, apparently..)

Next - Wrong subforum, try the "Win32 FDS" subforum. For NightRegulator support, try
www.ahost.co.uk (I think) or Contact Nightma12 by PM on these forums.

Next - From that screenshot, it would appear you haven't set up NR's FDS log path reading bit
properly. Try going through all your config files (or settings tabs, I'm far too used to BR) and
making sure all the settings are correct.

This is the wrong forum alltogether. It's best taking this to aohosts fourm, you will get more help,
faster.
