I get kicked from C&C_BasinTS. IRC says gactech is being kicked by Renguard for : Not running Renguard anymore.

Before the update to 1.032 I never had this problem. Any one else facing this issue and are you aware of any issues pertaining to that map?

<bump>

Normally I run with windows firewall off because I use blackice. Now the firewall status is green for on but actually selected off.

I know a friend of mine couldn't play glacier_flying anymore due to RG kicking him all the time on it. He tried to replace map, ... but to no avail. Never solved .
