I woke up today and the main toolbar to the right was missing in gmax. I forgot how to bring it back. Little help?

Exactly the same thing happened to me yesterday. I loaded up mt gmax file and there was no right hand panel nor mally you press "3" to hide/unhide it but it seemed to be nowhere to be found. In the end i rebotted gmax and it seemed ok. Strange though it seems to be lost.

Sometimes I've seen that toolbar spontaneously get dragged off the rightside of the screen. The

---

best way I've seen to get it back is to increase the resolution so you can (hopefully) see where it went and drag it back.
