my problem is everytime i try to open gamespy it crashes and says...

'the connection to the chat server was closed or timed out... gamespy cannot continue etc'

if u click reconnect after 2 secs screen appears again.

I have reinstalled twice.

manually uninstalled... deleting keys etc. Then installed.

used older versions...

and still it happens, randomly started doing a week ago and just never stopped.

Dont suppose anyone has a clue what to do... i sure dont.

Everyone always has a clue...I've never encountered a problem, where these guys dont at least TRY to fix it for you.

Not a clue on my end mate, im dumb as stump with computers.

You sure? A timeout could be caused by the client, behind your firewall being unable to receive packets.

Either that, or they've banned your IP or something...

Try using Ren-IP as a programme for starting Renegade instead of GSA.

<http://www.renwarz.com/download.php?view.313>

It is so simple to use and you can change your name in seconds to play in your favourite servers.

Hope this helps.
