sharra wrote on Wed, 23 May 2007 03:18I need a internet protacll thing any help here plesse

press start

select "run"

type in "cmd", then press enter

this brings up a little black window, this is your windows command interpreter

type in there "ipconfig" and press enter

ipconfig displays the Internet Protocol address, subnet mask, and default gateway for all adapters.

type in there "ipconfig" and press enter

ipconfig displays the Internet Protocol address, subnet mask, and default gateway for all adapters.

I would suggest using ipconfig /all instead of just ipconfig. Since that doesnt work when you got more networkadapters if lm correct. Anyway it will also show more information.
