There's a topic somewhere that tells you, God knows that many people have asked.

One thing though, don't try any radio mods with RenGuard, it'll bust your ass for cheating.

That was an sound mod.

We all have these sounds in always.dat

Some servers, might ban you for using the sound mod to play the radio sounds though.

I dont know where you get it.

Leveledit.

Presets tree -> Global Settings -> CnC Mode Settings.

Settings tab.

Scroll down until you find the radio commands.

Click the button next to one.

Pick another one from the strings database.

Note that not all strings have a sound attached.

You can figure it out by trying, or by looking into them from the Strings (Edit table) button at the top menu bar of level edit. I'm sure you will figure it out.

you lost me at lvedit

how do you do that?

sry im kinda new to renegade

In that case, welcome.

Start out by installing the mod tools

<ftp://ftp.westwood.com/pub/renegade/tools>

Other stuff on that page is equally useful, but you won't need it for what you're trying.

After you're done, and level edit is installed, fire it up, and make up a name for your new mod.

After that, retry the checklist.

Yep, only a max of 1000 people is allowed to that site at the same time. I can imagine there are billions of people from all over the world, standing in line to download the mod tools.

edit: in that case, ill download them for you, ill drop you a note in pm asap.

Changing text wont change what comes out it simple just changes what text shows up, and your the only one that can see the text. You need to find a new sound a replace it with the old one. When ur done just hit the X on level edit so u exit out and it will ask you to save preset, click yes. Then go to your renegadepublictools/"modpackage name" folder and go under preset and find the

file called objects.ddb and copy that into your data folder. Start ren up and test it.
