You have to add the flying parts yourself. Open up city file then add the parts.

[View Forum Message](#) <> [Reply to Message](#)

under terrain for city or walls select 'ramps' and click make
goto edit->level settings and select 'allow flying vehicles'
save the map as city_flying or walls_flying

make copy of city/walls_flying.mix and replace the ldd file in there.
copy new mix file to server\data
play

ok i got ramps but cant go into settings because when i click level settings it crashes because of
this file d3d8.dll

its one of those send or dont send error messages

[View Forum Message](#) <> [Reply to Message](#)

dont forget to make the one called "Flying Includes"

This has all the vehicle blockers etc to stop you flying off the map.

As a matter of fact I made the .lvl file the other day to walls flying and Ironwarrior was kind enough to add it to game-maps for me. To be honest with all the spamming of <http://www.game-maps.net> I do on the tutorials I can't believe you didn't look there.

<http://www.game-maps.net/index.php?action=file&id=787>

If I have some time later today or maybe tomorow I might add city flying too.

Yes I had the same problem, but in adiffrent area. Just try deleting the DLL and then it might work. For me Game.exe would not start because of this but deleting this solved the problem.

I am saying do not take his advice, following his advice will just cause you problems. He doesn't know what he is talkign about.

Also, please post more then just "0o" to express your confusion.

Sorry, I did not have a clear idea of what you were talking about in that case you should do what the screen shot says. Also in the renhelp faq is states the problem.
