I edited M00\_tutorial. When some1 tries to get on a ladder they just get stuck on there, they can't move up or down. When I try the ladders in Level Edit they work perfectly. YES the bottom of ladder is on the bottom and the top of the ladder is on top.

Weird.

Make sure the ladder world box is not stuck in the ground and that the bottom and top is lined up on each other.

Dont know what elas to say. :s

make the top one higher (maybe the terrain has some protruding meshes with collision)as long as the player can reach the top of the ladder it'll work

I'm editing M00\_tutorial and even the ladders that were already on the map don't work. I used the .lvl file to edit it and I didn't touch the ladders at the beginning of the map when you climb over the boxes.

I bet it is placed to far in and you are colliding with the walls, or perhaps they lost their rotation.

When you climb onto the ladder is any part of you protruding into the mesh?

If this is for serverside stuff what are you adding to the servers data folder?

I add the .lvl cuz its easier just to save it in there. When I save it the .idd .isd the .ddb file for the level and the .lvl. The .ddd is not objects.ddb is like M01.ddb or whatever.

Exactly what do you add to the data folder. I don't want to know what's saved because i already know that. I want to know what you add.

What, save the whole thing into the data folder, including the .lvl, .lsd, .ldd and .ddb?

WRONG!

OMG how stupid can you get? You only place the .ldd file into the data folder. I don't care if saving into the data folder is more convenient for you, it is so wrong. This is why your ladders don't work. If you add anything into the data folder with the same name as the map it will override anything inside the map. This includes .lsd and .ddb files. .lvl isn't such a problem but it just clutters the folder.

I would recommend saving into your level edit mod folder. That is the correct folder that should be used all the time. Then you can copy&paste/move the .ldd file into the data folder.

Problem solved?

Put the freaking .ddb into the data folder too.

I suspect the .lsd file is causing problems with the ladders. Just don't save anything from level edit into your data folder. It doesn't need to be in there.

What have you temped in the presets tree?

Have you supplied the objects.ddb with the map?

---

If not, delete the project and start again. And don't save into the data folder again -\_-

All I temped was a gun emplacement spawner. I also made another map that the ladders don't work right on. Same temp. Would not having a .thu file do anything? The map is running on Renegade FDS and I just took the .mix file from my Renegade data folder. I didn't have the .thu because I haven't loaded the map since I reinstalled it. Could this be the problem?

The thu file is for textures, tells renegade where to find them, so it can access them "more quickly."

[View Forum Message](#) <> [Reply to Message](#)

---

If you use the same temp on another map and still get this problem it'd be the temp.

Try it on a new map with a fresh set of objects. If it works it's the temp, if not i don't know.

[View Forum Message](#) <> [Reply to Message](#)

---

I made another map with a different temp and ladders still dont work. They work PERFECTLY in

---

Level Edit. I tried a different scripts version on my server, I've done practically everything I possibly could yet they still don't work. Does anybody else have any other ideas?

Ladder\_Bottom and Ladder\_Top MUST BOTH be selected in leveledit  
ie: hold control and select both of the ladder objects.  
This is the ONLY way you can move or rotate ladders..

Rotating or moving either Ladder\_Top or Ladder\_Bottom individually  
will fuxxup on the map and the ladders cant be used.

The only thing you can adjust freely is the z-axis up/down, every  
other movement of the ladder objects MUST be done while BOTH ladder  
objects are selected in the level.

Also rotating along the Y or X axis is not possible with ladders.

But if you have to move both at one time how will you get the other team be right on top of the  
other?

---

---

[View Forum Message](#) <> [Reply to Message](#)

---

Read what i said ... You can only move them individually along the Z axis  
Up and Down. ie: adjust the top/bottom position for the ladder, every other  
movement must be done while both are selected and rotating along x/y is not possible neither.

edit: you also MUST "make" both the top/bottom object without  
moving the camera position or they are not aligned anymore -> they  
wont work then

That's EXACTLY what I do except instead of rotating them I type the number in the z rotation box under position. You can check out my ladders on my server on WOL host name is Sn1per71 game name is AOW mission maps.

I'm starting to think that maybe its ressurection that's making the ladders not working on my server. They worked when I first started hosting without any added stuff on my server. But when I try to rename ressurection.dll my server doesn't show up in the server listings.
