I know its on here, cause ive read it before.
Whats the Run command for setting the processes your computer starts up?
I wanna change it to as fast as it can go, any one tell me which i need, and which i dont, that'll be help ful.

Thanks.

If you disable everything, Windows reenables everything it wants, but so do some other things.

windows wont start up programs though, windows services it will, but not programs, you can turn any program thats listed as a startup item to not start, my PC loads 500x faster since finding about msconfig a few years ago.

There's like 5 processes or so which are standard on in Windows ( For example Wireless, Help files)
If you dont use wireless. Can be turned off. This can be done via system management and then services

To make it even faster

Takes effort and time to tweak a system
